

MANJIT SITHURAJ

Full-Stack Software Engineer C# · .NET · Angular · Azure · AI/LLM

Bengaluru, India — +91 87783 22785 — manjit444manjit@gmail.com — linkedin.com/in/manjit-sithuraj

Professional Experience

Product Engineer

May 2026 – Present

Framsikt AS, Bengaluru, India

C#, .NET 9, Semantic Kernel, Azure OpenAI, Angular 20, Azure

- Built an AI reporting assistant (Azure OpenAI + Semantic Kernel plugin architecture) enabling non-technical users across 240+ municipalities to query financial data in natural language; enforced strict multi-tenant isolation via AsyncLocal request context and hardened against prompt injection and XSS — backed by 90+ security tests.
- Re-architected the reporting data pipeline from Azure Blob + Parquet to EF Core SQL snapshot tables, making collected data immediately queryable; built an HTTP resilience layer with Polly (retry, circuit breaker, timeout) for external government API integrations.
- Built a 17-agent story-to-PR agentic pipeline automating brainstorming through PR creation, with a pre-push quality gate (CodeRabbit + Aikido), a runtime migration-apply gate, and an **AI-based automatic bug-fixing agent** embedded in GitHub Actions that detects, diagnoses, and patches failing builds without human intervention.
- Implemented **blue/green deployment with auto-rollback** across all environments, enabling trunk-based development; proposed and architected a **centralised feature flag management system** (configuration-as-code) adopted by the CTO — codegen generates tenant/role-targeted flag JSON in the CI pipeline (zero manual JSON handling), with flag health monitored live via Azure Application Insights.
- Integrated Brreg business registry (CEO sync, auditor fetch, 3-year financial history) and implemented dynamic multi-account Azure Storage following the 12-Factor App pattern, eliminating hardcoded connection strings and Key Vault init deadlocks.

Software Engineer

Jun 2023 – May 2026

Framsikt AS, Bengaluru, India

C#, .NET 8, ASP.NET Core, Angular, Azure, SQL Server, Docker

- Rewrote the KOSTRA statutory financial-reporting module (service layer + Angular UI) and delivered the Budget Proposal Process feature across 7 screens and 7 new database tables.
- Reduced Azure compute costs by ~80% by profiling hot paths and restructuring request handling with MediatR and Clean Architecture; migrated 20+ legacy AngularJS components to Angular with lazy loading, cutting median page load from 13s to 2s across 30+ municipalities.
- Migrated the codebase from Azure DevOps to GitHub and configured GitHub Actions pipelines with parallel execution, cutting pipeline run time by 45%; integrated Coverity/Polaris, Black Duck, and SonarQube scanning into CI.
- Led a Jest → Vitest migration (29 suites / 630 tests) and built a containerised Playwright E2E sandbox running the real application on CI.
- Fixed Module Federation micro-frontend authentication, route sync, and basepath normalisation across a shell/remote architecture; instrumented the SPA with Azure Application Insights.
- Built an Azure Service Bus admin-alert import pipeline using background and message processors; implemented data-export capabilities across investment, financing, and budget-change pages.
- Established a secretless architecture with Azure Managed Identities and Key Vault; integrated the Plandisc calendar API for 30+ municipalities, reducing manual processing from 6 hours to 30 minutes.

Engineering Intern

Aug 2022 – Apr 2023

Zoho Corporation (ManageEngine), Coimbatore, India

Java 8, SQL, REST

- Developed backend services for Chrome OS Mobile Device Management using Java 8 and Google Admin SDK, enabling administrators to push structured policy profiles to managed devices at scale.
- Designed relational database schemas and XML serialization pipelines to process administrative profiles over secure REST channels.

Technical Projects

Cerebral Bridge (Co-Founder & Architect)

C#, Python, React, MongoDB, Azure Service Bus

- Architected a 3-service AI learning platform — MERN onboarding portal, Python/React AI tutor engine, and a .NET notification service communicating via Azure Service Bus; deployed via GitHub Actions.
- Built four AI capabilities using Azure OpenAI: a mock interview simulator with rubric-based scoring, a lecture note summarizer, a YouTube-transcript quiz generator, and a real-time Q&A chat.

Education

B.E., Electronics and Communication Engineering

Jun 2019 – May 2023

KPR Institute of Engineering and Technology, Coimbatore, India

CGPA: 8.4 / 10.0

Technical Skills

- **Languages:** C# (.NET 8/.NET 9), TypeScript, JavaScript, SQL, Java
- **Backend:** ASP.NET Core, EF Core, Clean Architecture, CQRS, MediatR, Polly, Semantic Kernel, Azure OpenAI
- **Frontend:** Angular 20, RxJS, Module Federation, Kendo UI, TypeScript

- **Cloud:** Azure (Service Bus, Key Vault, Blob Storage, App Insights, OpenAI, Managed Identities)
- **Testing & Quality:** Vitest, Jest, Playwright, SonarQube, Coverity/Polaris, Black Duck, CodeRabbit
- **DevOps:** Blue/Green Deployment, Auto-Rollback, Trunk-Based Development, Feature Flag Management (Config-as-Code), GitHub Actions, Azure DevOps, Docker
- **Patterns:** Microservices, Clean Architecture, CQRS, Repository, Unit of Work, Circuit Breaker
